Summary

Software Developer with **3+ years of experience** specialising in building fast, accessible, and modern web applications using React.js and Next.js. Strong command of **TypeScript, Tailwind CSS, and component-driven architecture** — with a track record of translating complex Figma designs into pixel-perfect, responsive interfaces across **7+ production projects for international clients**. Experienced in **fully dynamic CMS-driven architecture, custom admin panel development**, performance optimisation (SSR/SSG, code splitting, lazy loading), and scalable state management (Zustand, Redux). Comfortable **owning the full frontend layer from architecture through deployment** in fast-paced Agile environments.

Technical Skills

Core: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend: Tailwind CSS, Material UI (MUI), ShadCN UI, Chart.js, Responsive Design, Zustand, Redux, Context API, TanStack Query, React Hook Form, React Testing Library, Yup, Zod

Performance: SSR, SSG, Code Splitting, Lazy Loading, Image Optimisation, Performance Optimization, SEO

API & Integrations: RESTful APIs, OpenAI API, GoogleGenAI, Stripe, DocuSign, Google Analytics

Tools: Git, GitHub, Figma, VS Code, Cursor, Jira, Trello, Docker, GitHub Actions (CI/CD)

Methodology: Agile, Scrum, Kanban, Code Reviews

AI Tools: Claude AI, Cursor AI, GitHub Copilot, Lovable

Professional Experience

Software Developer

January 2023 – Present

Vivansh Infotech Pvt Ltd, Ahmedabad

- Led frontend development across **7+ client projects** using React.js and Next.js, owning component architecture, routing, and UI system design from scratch to production deployment.
- Translated **Figma designs** into pixel-perfect, fully responsive interfaces — maintaining design fidelity across breakpoints and ensuring cross-browser consistency throughout.
- Boosted application performance by implementing **code splitting, lazy loading, and image optimisation**, resulting in faster initial page loads and improved Core Web Vitals scores.
- Architected **SSR and SSG rendering strategies** in Next.js with structured data and meta tag optimisation, improving SEO visibility for multiple client-facing products.
- Integrated **AI chatbot UIs with real-time streaming responses (OpenAI API)** — handling progressive rendering, loading states, and error recovery in the frontend layer.
- Built scalable **state management (Zustand, Redux)** and standardised form handling (React Hook Form, Yup) across all projects, and maintained a **shared component library** with ShadCN UI and Tailwind CSS.

Projects

Dip'n'Dip — International Cafe Chain Website + Admin Panel

- Built the complete website for **Dip'n'Dip**, an international cafe chain across the Middle East, Europe & Asia, using a **100% dynamic content architecture** — all content API-driven with zero hardcoded data.
- Engineered a full **custom Admin Panel** for non-technical staff to manage menus, promotions, branches, and media in real time, with multi-region and multi-language support.

PrintFlow360 — Print Business Management Platform

- Built a **B2B print management platform** digitising order workflows with a **dynamic multi-step order form** where fields adapt based on product type and print specifications.
- Designed a scalable **component system with ShadCN UI** and managed order lifecycle state with Zustand, reducing time-to-ship per sprint and keeping UI in sync with backend changes.

SafetyTrack — Safety & Training Management Platform

- Developed frontend for a **safety & training management platform** on Next.js + TypeScript — **improving dashboard performance by ~30%** through SSR, code splitting, and optimised state management.
- Integrated secure REST APIs for auth, course management, and training workflows, and delivered **pixel-perfect Figma-to-UI** components across all device sizes.

Education

B.Tech Computer Science — Darshan Institute of Engineering and Technology, Rajkot | 2019 – 2023

CGPA: 8.50 / 10
